

Yang Yu

Software Engineer / Web APIs, User-Facing Systems & AI Applications

Davis, CA | devilsrocbuddhasgildedimage@gmail.com | +1-530-304-3656

linkedin.com/in/yy030305 | github.com/eyesofish

Technical Skills

- **Languages:** JavaScript, Python, Java, SQL, C++
- **Web, APIs & Data:** FastAPI, REST APIs, async API design, MySQL, Redis, Docker, recommendation systems
- **AI Applications:** LangChain, LangGraph, RAG, embeddings, vector retrieval, reranking, PyTorch, Qwen API
- **Engineering:** Git, unit testing, CI/test triage, debugging, monorepo build/test workflows, technical documentation

Experience

- **Microsoft** Suzhou, Jiangsu, China
Software Engineering Intern Jun 2026 – Present
 - Integrated the Microsoft Copilot mobile codebase, using sparse checkout and prebuilt dependencies to establish local builds and unit tests for a large monorepo; validated authentication and a demo in an iPhone simulator.
 - Diagnosed a macOS Keychain authorization loop and Apple IDE version mismatch, restoring source access and the local build workflow through evidence-driven debugging and team-pinned tooling.
 - Triageed about 30 reliability-pipeline builds, identifying six test targets as deterministic failures rather than flaky tests and supporting isolation to improve signal quality.

Projects & Open Source

- **ZhihuRec 1M Recommendation System Prototype** Apr 2026 – May 2026
FastAPI, MySQL, Python, JavaScript, Docker
 - Built a user-facing search and recommendation prototype with feed, search, event, profile, and debug REST APIs, connecting JavaScript clients to FastAPI back-end services.
 - Implemented multi-source retrieval, topic reranking, hot/fresh fallback, cold-start profile blending, and click-driven profile updates across the product workflow.
 - Validated search-to-feed behavior across 121 replay events, raising Post-Search Topic Carryover@10 from 0.9000 to 1.0000 (Gain@10 = +0.1000).
- **LLM + RAG Software Engineering Resource Recommender** Jan 2026 – Present
LangChain, LangGraph, deepagents, Qwen API
 - Built an agentic RAG workflow that uses embeddings, vector retrieval, filtering, and reasoning to organize source-grounded technology recommendations.
- **Apache Incubator ResilientDB – Raft Implementation** Sep 2025 – Nov 2025
C++, Bazel, Protobuf/RPC, Distributed Systems
 - Implemented leader election, log replication, persistence, snapshots, and crash recovery in a personal ResilientDB branch, integrating protocol and RPC changes into an existing codebase.

Education

University of California, Davis
M.S. in Computer Science (Expected May 2027)

Davis, CA
Sep 2025 – May 2027

Dalian University of Technology
B.Eng. in Software Engineering

Dalian, China
Aug 2021 – Aug 2025
