

Yang Yu

Software Engineer / Python, Automation & AI Systems

Davis, CA | devilsrocbuddhasgildedimage@gmail.com | +1-530-304-3656
linkedin.com/in/yy030305 | github.com/eyesofish

Technical Skills

- **Languages:** Python, SQL, Java, JavaScript, C++
- **Automation, APIs & Data:** FastAPI, REST APIs, async API design, MySQL, Redis, Docker, Kubernetes, Git
- **AI & Machine Learning:** LangChain, LangGraph, agentic workflows, RAG, embeddings, vector retrieval, reranking, PyTorch
- **Engineering:** troubleshooting, unit testing, CI/test triage, deployment workflows, monorepo build/test workflows

Experience

- **Microsoft** Suzhou, Jiangsu, China
Software Engineering Intern Jun 2026 – Present
 - Integrated the Microsoft Copilot mobile codebase, using sparse checkout and prebuilt dependencies to establish a repeatable local build and unit-test workflow for a large monorepo.
 - Diagnosed a macOS Keychain authorization loop and Apple IDE version mismatch, restoring source access and build execution by rebuilding credentials, clearing conflicting processes, and installing team-pinned tooling.
 - Triageed about 30 reliability-pipeline builds, identifying six test targets as deterministic failures rather than flaky tests and supporting isolation to reduce automation noise.

Projects & Open Source

- **LLM + RAG Software Engineering Resource Recommender** Jan 2026 – Present
Python, LangChain, LangGraph, deepagents, Open API
 - Built an agentic automation workflow that decomposes technical requests into retrieval, filtering, reasoning, and structured result-organization stages.
 - Aggregated datasets, benchmarks, open-source projects, and tools to return source-grounded recommendations for technical decision-making.
- **ZhihuRec 1M Recommendation System Prototype** Apr 2026 – May 2026
FastAPI, MySQL, Python, JavaScript, Docker
 - Developed feed, search, event, profile, and debug REST APIs with multi-source retrieval, reranking, cold-start profile blending, and click-driven profile updates.
 - Tested the search-to-feed feedback loop across 121 replay events, raising Post-Search Topic Carryover@10 from 0.9000 to 1.0000 (Gain@10 = +0.1000).
- **Apache Incubator ResilientDB – Raft Implementation** Sep 2025 – Nov 2025
C++, Bazel, Protobuf/RPC, Distributed Systems
 - Implemented leader election, log replication, persistence, snapshots, and crash recovery in a personal ResilientDB branch, troubleshooting integration across protocol, RPC, and state-machine components.

Education

University of California, Davis
M.S. in Computer Science (Expected May 2027)

Davis, CA
Sep 2025 – May 2027

Dalian University of Technology
B.Eng. in Software Engineering

Dalian, China
Aug 2021 – Aug 2025
